

IN THE ABSTRACT:

Please substitute the following Abstract for the Abstract starting at page 30, line 2 and ending at line 18.

A reflection display device ~~that comprises~~ includes a display substrate and a rear substrate disposed with a predetermined space~~[[;]]~~, a transparent liquid disposed in the space between the substrates~~[[;]]~~, and a partition wall formed from a material capable of ~~transmit~~ transmitting light and disposed between the substrates; ~~a~~, A shielding layer is disposed between the partition wall and the rear substrate~~[[;]]~~, and a light scattering layer is disposed on the rear substrate, ~~wherein a~~, A refractive index of the partition wall is larger than that of the transparent liquid, a refractive index of the partition wall is larger than that of the transparent liquid, and among light rays incident on the display substrate at a predetermined incident angle or more, a light ray that enters the partition wall is not totally reflected but refracted at a side of the partition wall, whereby having an enhanced reflectance.
